

Shop Addon

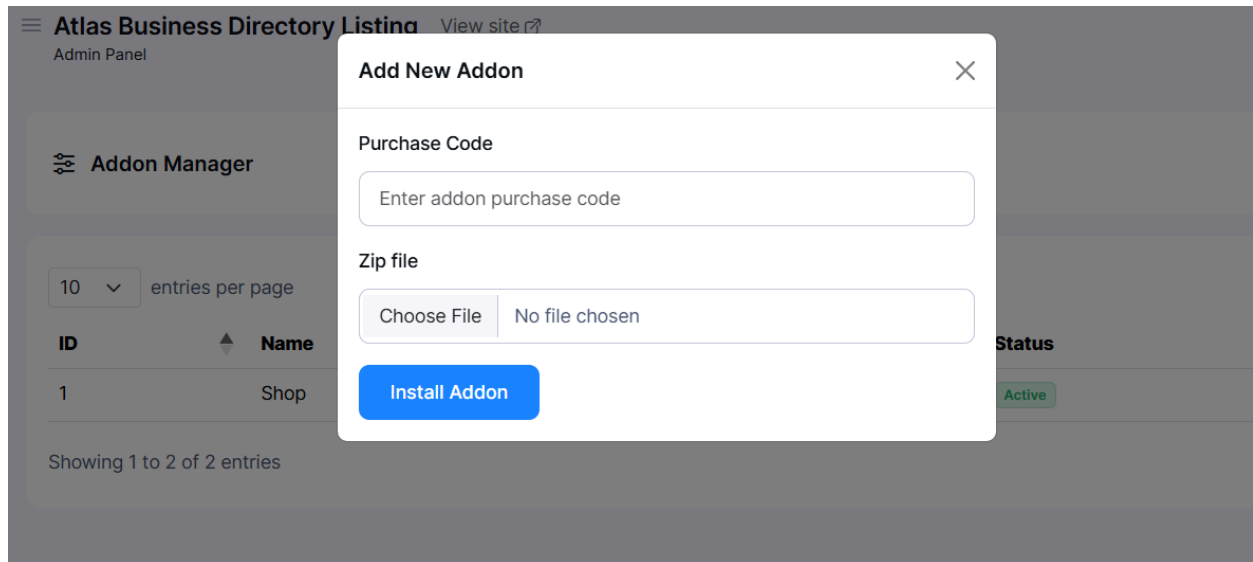

The Shop Addon is a powerful and user-friendly extension designed to allow both admins and agents to create and manage products directly from the admin panel. With this addon, products can be easily added, categorized, and displayed in a dedicated product listing section on the frontend.

Once a product is created, it becomes visible to all users in the product listings. Users can browse through the available products, view detailed information, and if they like a product, they have the option to place an order directly from the site. This seamless flow enhances the overall user experience and provides a streamlined shopping feature within the platform.

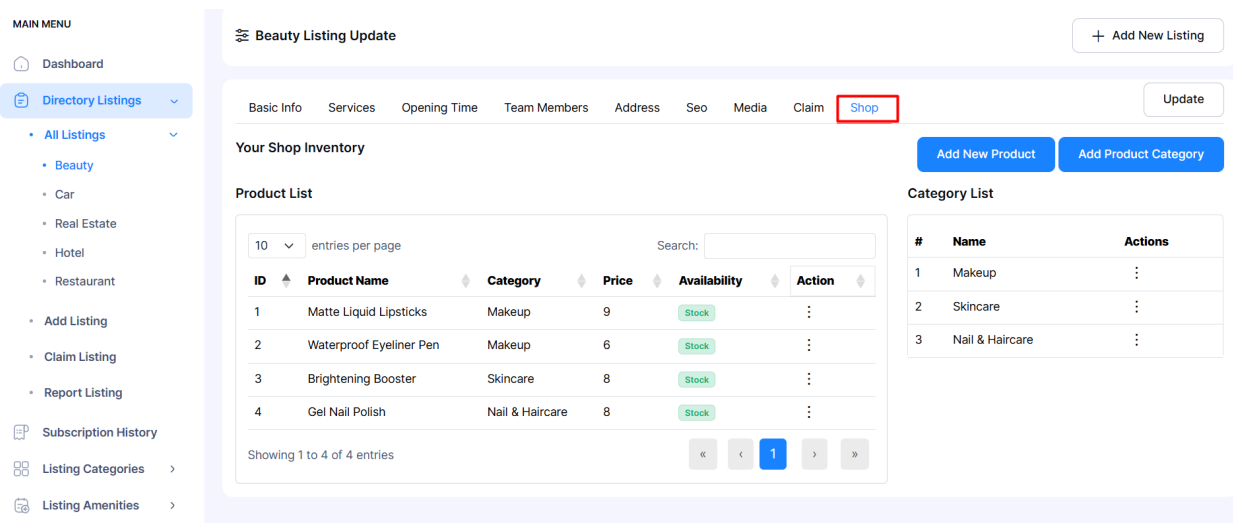

Admin Guide:

To install an addon, the admin can go to the admin panel, click on 'Addons' in the left navigation, and choose the option to install an addon. By clicking on 'Add New Addon,' uploading the purchase code and addon zip file, and then clicking 'Install Addon,' the addon will be successfully installed.

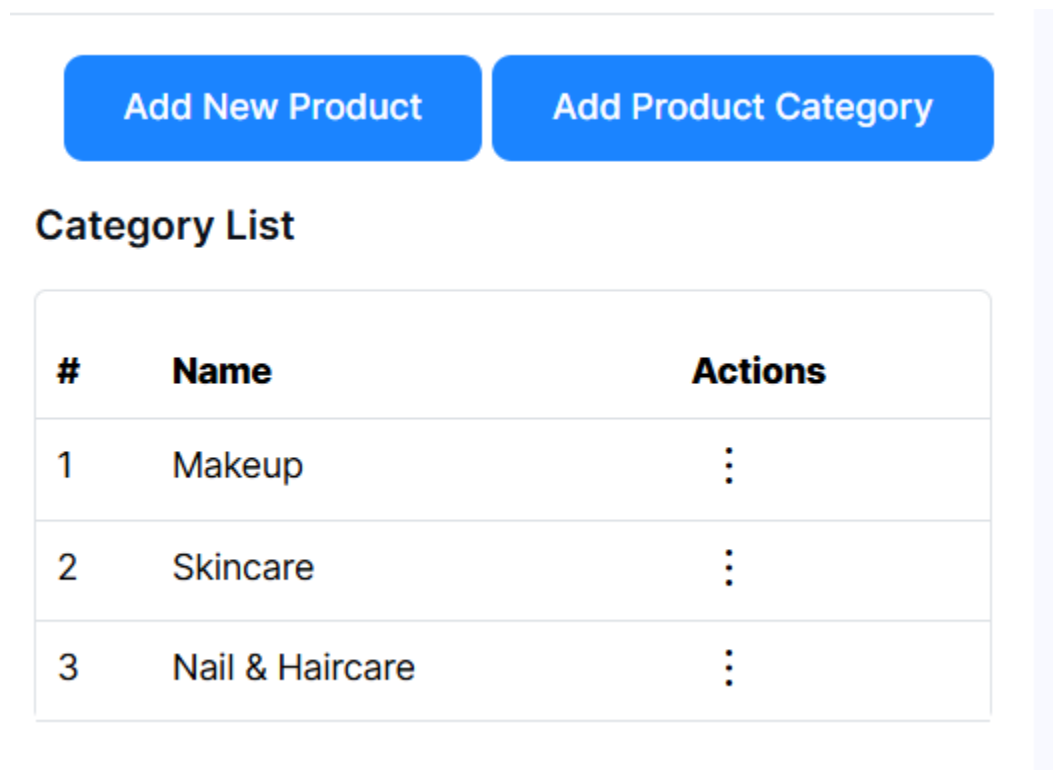

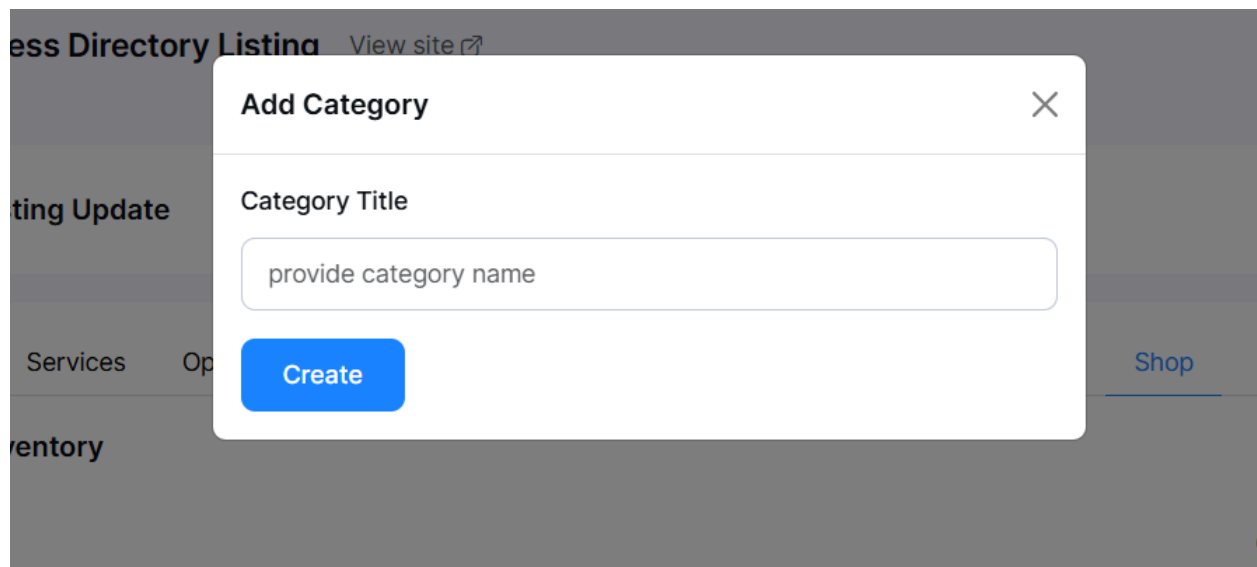

After the admin installs the shop add-on, the admin will be able to list products. Under the 'Shop' tab, they will be able to add products and product categories.

To add a product, the admin must first create a product category. To create a category, they need to click on the **"Add Product Category"** button. When they click the button, a modal for creating a category will appear. After entering the category title and clicking the **"Create"** button, the

category will be successfully created.

To create a product, the admin needs to click the **"Add New Product"** button. Upon clicking, a modal for adding a product will appear. After filling in all the necessary information in the modal and clicking the **"Create"** button, the product will be successfully created.
